

STRAHINJA PAVIĆEVIĆ

Software Developer

@pavicevicstrahinja99@gmail.com <https://strahinja.vercel.app>

SUMMARY

Hello, I'm Strahinja, a full-stack developer from Serbia with a passion for creating web, desktop, and mobile applications. I love building with Next.js and diving into all aspects of web development.

I enjoy tackling complex problems and always strive to learn new technologies. My work spans from front-end design to back-end development, ensuring that everything works together smoothly. Whether it's a responsive website, a full-stack application, or a mobile app, I aim to create engaging and user-friendly experiences.

WORK EXPERIENCE

Freelance Developer

07/2023

Remote

Location

As a freelance developer, I specialized in creating web and desktop applications that not only worked great but also looked amazing, as well as transforming Figma designs into fully functional applications that matched the original vision and provided a smooth user experience.

I worked closely with clients to understand their needs and goals. My approach focused on open communication, iterative development, and thorough testing. This ensured that the final product not only met but exceeded expectations. I valued transparency and used data to make smart decisions, ensuring that the applications I built were both beautiful and highly functional.

PROJECTS

AI Content Generator

06/2024

Typescript, Next.js, React.js, Gemini API

- AI Content Generator is a cutting-edge application that simplifies the content creation process using advanced AI technology and an intuitive interface. It features customizable templates, multi-language support, SEO optimization, and a rich text editor, allowing users to efficiently generate high-quality content for various needs.

ChatFlow

06/2024

Typescript, Next.js, React.js, Covex

- Chat Flow is a powerful chat application built with Next.js, Clerk, Convex, TypeScript, and Tailwind CSS. It aims to provide users with a seamless and secure messaging experience, featuring user authentication, real-time messaging, responsive design, and type safety throughout the application.

PasteZone

12/2023

Typescript, Next.js, React.js, Drizzle

- PasteZone is a clone of 'pastebin.com', offering users the ability to create, publish, edit, and delete pastes. With features like password protection, privacy settings, and fast ORM integration with DrizzleORM, PasteZone provides a secure and efficient platform for managing and sharing text snippets.

Chess Engine

07/2023

C#, Winforms, Networking

- Chess Engine is a C# project focused on implementing standard chess gameplay with notable features and modes, offering a comprehensive chess experience. It includes multiplayer functionality for networked matches, turn-based timers for move time limits, real-time game state tracking, and visual indicators for check and checkmate situations.
